Abstract of JP8164669

PURPOSE: To form an image with good recording sensitivity, color separation, and a clear color tone without bleeding **CONSTITUTION:** In a multicolor thermosensible recording material in which two thermosensible coloring layers which have different coloring temperatures and develop color in different color tones are laminated on a support, a colorless or hypochromic leuco dye as a coloring component of the upper thermosensible coloring layer and a color developing-subtracting agent having a coloring- decoloring function or a reversible developer is added.
